

NAPA Member sourcing statements

Aquascot:

In the event of a failure of the Blue Whiting FIP, Aquascot will review our sourcing policy for feed used by our Scottish salmon farming suppliers and will aim to source this product only from coastal states that are reviewing their fishery management plans in line with NAPA's recommendations.

Skretting Norway:

'Skretting Norway only buys marine raw materials from whole fish that are certified or subject to a Fishery Improvement Project (FIP). So, we stopped sourcing fish meal and fish oil containing blue whiting when the MSC certification for blue whiting was suspended earlier this year – due to continuing dispute over quota allocation of blue whiting resulting in overfishing to continue.

We are calling on the North East Atlantic Fisheries Commission (NEAFC) coastal States to agree quotas in line with scientific advice and implement a long-term science-based management plan for blue whiting.

To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) blue whiting fishery improvement plan (FIP) and will start to source blue whiting if the FIP is implemented. Should progress falter, or the FIP fail, we will continue our stand to not source fishmeal containing uncertified blue whiting.

Labeyrie-Fine-Foods:

Labeyrie-Fine-Foods currently sources Mackerel and Herring from FAO27 and actively supports NAPA's Northeast Atlantic mackerel and Atlanto-scandian herring fishery improvement programme (FIP) as a stakeholder, to restore the Fisheries MSC certification.

If these fisheries continue to fail to deliver the requirements of our sourcing policy and cannot agree on quota allocation and the implementation of an effective dispute mechanism, we will

re-evaluate our sourcing choices with a view to only select Coastal States championing sustainability that actively support NAPA.

TripleNine:

TripleNine advocates for sustainable fishing and long-term stable management plans. With blue whiting being a very important raw material source for our European productions, we were very disappointed when the MSC certification for blue whiting was suspended earlier this year, due to continuing dispute amongst the coastal States over quota allocation of blue whiting resulting in fishing above the scientific advice.

We are calling on the North East Atlantic Fisheries Commission (NEAFC) coastal States to agree a quota allocation model ensuring total catches in line with scientific advice and implementation of a long-term science-based management plan for blue whiting.

To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) blue whiting fishery improvement plan (FIP). Should progress falter, or the FIP fail, lower market demand for uncertified blue whiting fishmeal and fish oil will reduce the volumes and prices we are able to pay for this raw material significantly with a risk that we cannot produce this species at all.

LDH (LA DORIA) Ltd:

LDH sources mackerel from the North East Atlantic FAO Area 27. We are participating in the North Atlantic Pelagic Advocacy Group (NAPA) fishery improvement programme (FIP) which calls on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan. Within NAPA we are advocating for a cap/ban on catching mackerel in international waters and for a cessation of unilateral quota setting.

Whilst we participate in NAPA we will continue to source North East Atlantic mackerel for own branded products only from Coastal States championing sustainability. For our own branded products we have made a commitment to neither source from nations setting quota unilaterally nor from nations catching in international waters. For products packed under our customer's brands, we will collaboratively engage with them and follow their guidance.

Young's:

Young's is the UK's largest seafood processor, with a global supply chain, encompassing over 40 wild capture and aquaculture species. In light of this, we recognise the diverse interests of all stakeholders in the fishing and aquaculture industries. We engage openly in dialogue with all parties, including fishermen, fish farmers, governments, trade associations, non-governmental organisations (NGOs) and food retailers. We will strive to ensure that our policies, values and behaviour regarding responsible fish procurement are leading and shaping opinion – and to pursue a vigorous and positive agenda for change rather than being merely passive or responsive to criticism or challenge.

As a business that has both direct and indirect involvement in North East Atlantic pelagic species through Young's Brand and private own-label retailer products, we see the North Atlantic Pelagic Advocacy (NAPA) Group as a fundamental tool in driving change in these fisheries. Young's considers that the unilateral setting of quotas is an unacceptable threat to shared-stock fisheries and that the coastal states involved in these fisheries should support securing an agreement on total allowable catches in line with ICES advice and strive for a long-term science-based management agreement. We aim to support this process by working pre-competitively with NAPA members to add our voice to public advocacy as well as directly writing to coastal state delegations and emphasising our position.

Should the NAPA process result in a failure to reach the agreed FIP action plan aims, we will review our sourcing decision and take actions that we deem to be appropriate at the time – the decisions that we make will be further guided by the Sustainable Seafood Coalition Codes of Conduct on Environmentally Responsible Fish and Seafood Sourcing and Environmental Claims. Whilst we are fully committed to playing a role in finding a solution to the management challenges of NE Atlantic pelagic fisheries, the unfortunate consequence of this situation remaining unresolved and total catches continuing to be in excess of the ICES advice, is that Young's would cease sourcing from these fisheries.

Morrisons:

In 2019 and 2020 mackerel, herring and blue whiting fisheries lost Marine Stewardship Council certification in the Northeast Atlantic ocean. This backwards step was largely brought about by the challenges associated with multiple different fishing nations failing to agree on appropriate shares of catch, so that volumes caught do not exceed sustainable limits.

Working with our peers we have helped establish NAPA, a group which has subsequently established two formal fishery improvement programmes. Through advocacy these

programmes of work aim to bring about dialogue among key fishing nations, to establish systems of sustainable catch allocation, in line with scientific advice.

While we participate in NAPA we will continue to source from fisheries within the improvement programmes. As this work progresses we will be reviewing the engagement and efforts of different states in supporting dialogue and a sustainable solution to allocation, and will use this information to inform our approach to future sourcing.

Cargill:

Cargill is committed to working with our supply chains to develop and maintain sustainable sources of raw materials. Our aquaculture nutrition business uses fishmeal and oil from forage fisheries and trimmings from fisheries for direct human consumption. Demonstrating sustainable management of the fisheries we source from is critical – not just for our reputation, but also to enable fishmeal and oil to be continued to be used in feeds for a sustainable aquaculture sector.

When the MSC certification for blue whiting was withdrawn in December 2020, we publicly recorded that we stopped buying material from blue whiting caught after that date. Establishing a Fishery Improvement Program (FIP) through the North Atlantic Pelagic Advocacy Group (NAPA) provides a highly credible way for regulators, fishing associations and fishers to engage to find a solution that delivers a long term solution for sustainable management of the shared stocks. We call on all stakeholders to engage actively and sincerely in the progress in line with broader commitments to ocean stewardship as part of a sustainable economy.

As long as the FIP demonstrates progress against its goals, we will support the sector by purchasing marine ingredients with blue whiting. However, if the FIP fails, we will continue our stand not to source marine ingredients containing uncertified blue whiting.

Karsumund Protein:

In Norway, all pelagic fish is sold in auction at Norges Sildesalgslag (NSSL), Norwegian Fishermen's Sales Organization for Pelagic Fish. The blue whiting is legally fished according to current quota regulation and it is traded at the auctions at NSSL.

The blue whiting is one of the most important species for Karsumund Protein. It will therefore be very crucial that the coastal states clarify this fishery. In anticipation of this happening,

Karmsund Protein participates in NAPA's application for an IP for the blue whiting to Marin Trust.

If the application to Marin Trust's improvement program (IP) should fail, Karmsund Protein will still be forced to buy blue whiting to maintain and expected activity levels. The consequences will be a changed marketing strategy and a reduced turnover for the company.

Hilton Seafoods UK:

Hilton Seafoods UK do not currently purchase any mackerel, herring or blue whiting from the North Atlantic but do buy aquaculture products with North Atlantic pelagic ingredients in the feed. Hilton Seafoods UK recognise the importance of the sustainability of all feed ingredients in aquaculture and seek to preferential source from aquaculture supply chains that can demonstrate, when sourcing North Atlantic Pelagic ingredients, alignment with the aims of the NAPA fishery Improvement Project. Progress of coastal states on these aims will influence this position in the future.

Asda:

ASDA sources North East Atlantic mackerel and herring from FAO Area 27 but is concerned by the suspension of the MSC certification from these fisheries which we and our customers demand. We are calling on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan. To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) [Northeast Atlantic mackerel and Atlanto-scandian herring](#) fishery improvement programme (FIP) and will continue to source North East Atlantic mackerel while progress is being made. Should progress falter, or the FIP fail, we will cease sourcing North East Atlantic mackerel from FAO Area 27.

Friesenkrone:

Friesenkrone is a major producer of fish products with a focus on "herring products" in Germany. We supply all discounters in Germany, among others. About 2/3 of our supply is Norwegian herring (NVG herring). The loss of the MSC certification at the beginning of 2021 poses great challenges for us and the market. The exclusive supply of MSC herring from the

North Sea is not sufficient in terms of quantity and does not meet our quality requirements and those of our customers, e.g. with regard to the size and stability of the raw material.

Therefore, we are very interested that the FIPs initiated by NAPA are successfully implemented and lead to the herring fishery but also the mackerel and blue whiting fisheries becoming sustainable again and regaining their MSC label as soon as possible. This is almost an existential issue for us. Failure could have far-reaching consequences for our further business development.

Tesco:

Mackerel is one of the top five seafood species at Tesco. We have been monitoring closely the lack of effective management for the North East Atlantic pelagics and were pivotal in the creation of North East Atlantic Pelagic Advocacy Group (NAPA). We are calling on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan.

As responsible buyers, should we not see any progress in 2022 we will freeze our mackerel volumes. Should the FIP fail we would then be forced to reconsider our sourcing options.

International Fish Canneries/Nor-Sea:

We source our mackerel from the North East Atlantic FAO Area 27. We are participating in the North Atlantic Pelagic Advocacy Group (NAPA) fishery improvement programme (FIP) which calls on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan.

Within NAPA we are advocating for a cap/ban on catching mackerel in international waters, for better recognition of coastal states acting more responsibly, and for a cessation of unilateral quota setting.

Whilst we participate in NAPA we will continue to source North East Atlantic mackerel for own branded products only from Coastal States championing sustainability. For own branded products we have made a commitment to neither source from nations setting quota unilaterally nor from nations catching in international waters. For products packed under our customer's brands, we will collaboratively engage with them and follow their guidance.

Princes Ltd.:

Princes Ltd. sources North East Atlantic mackerel from FAO Area 27 but is concerned by the suspension of the MSC certification from these fisheries which our customers and consumers demand. We are calling on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan. To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) [Northeast Atlantic mackerel and Atlanto-scandian herring](#) fishery improvement programme (FIP) and will continue to source North East Atlantic mackerel while progress is being made. Should progress falter, or the FIP fail, we will continue to advocate for sustainable management of the fishery but may need to review our sources, particularly should total catches continue to exceed ICES advice.

Waitrose:

As a partner in NAPA, Waitrose is seeking to help secure the long term health of the mackerel, herring and blue whiting fisheries. Waitrose has made a commitment to source only third party certified fish from 2025. In making this commitment we will be able demonstrate an assurance of our sourcing.

Failure to gain re-certification of mackerel and herring therefore puts at risk our ability to source these products and sell them to Waitrose customers. Whilst we do not sell blue whiting directly, it is part of the feed in our supply chain, as with mackerel and herring, failure to gain certification puts at risk the use of it in feed used for products we sell.

Coop:

Co-op urges the North East Atlantic Fisheries Commission (NEAFC) coastal states to agree quotas for mackerel, Atlanto-Scandian herring and blue whiting in line with scientific advice and to implement a long-term science-based management plan for these fisheries. The Co-op Healthy Oceans Strategy ensures we have fish for the future and thriving marine ecosystems. We source mackerel and blue whiting directly and indirectly from the North East Atlantic and support the North Atlantic Pelagic Advocacy (NAPA) Northeast Atlantic mackerel and Atlanto-scandian herring fishery improvement projects (FIP) and MarinTrust blue whiting improvement project. It is vital these FIPs are successful and if they do unfortunately fail due to lack of support from NEAFC or the coastal states, Co-op will have to review our sourcing options.

Northeast Nutrition:

All fishmeal and fish oil used by NNS is from managed fisheries purchased through approved suppliers, with a focus on the MarinTrust and Marine Stewardship Council (MSC) standards.

Northeast Nutrition Scotland are active committee members of the North Atlantic Pelagic Advocacy Group (NAPA), and as such are committed to supporting NAPA's action plans on the fishery improvement project (FIP) for Northeast Atlantic mackerel and Atlanto-scandian herring, and a MarinTrust improvement project (IP) for blue whiting. In line with this commitment, we will continue to review our supply of marine products, assessing the species utilised, their origins and related certifications. Should progress falter on the FIP and/or MarinTrust IP, or these fail, NNS will re-evaluate its supply chain for these marine raw materials.

Aldi Group:

As responsibly acting retailers, the ALDI SOUTH Group and the ALDI Nord Group of companies has set the goal to source 100% of ALDI-exclusive brand seafood products from [responsibly managed fisheries and farms](#). We are concerned by the suspension of the MSC certification from North East Atlantic mackerel and Atlanto-scandian herring fisheries from Food and Agriculture Organisation (FAO) Area 27. We believe the management of these fisheries shows gaps, including a lack of a binding allocation of catch quotas for both fish species in line with scientific advice between all catch nations. It is important that the North East Atlantic Fisheries Commission (NEAFC) coastal states adhere to scientifically advised catch level and to implement a long-term science-based management plan for mackerel and herring.

We have joined the [North Atlantic Pelagic Advocacy Group \(NAPA\)](#) to advocate for effective international agreement. NAPA aims to drive sustainability in these fisheries by generating momentum towards an agreement on total allowable catches in line with scientific advice, as well as long-term science-based fisheries management strategies. To address these issues they established the [Northeast Atlantic Ocean mackerel and herring - hook & line, trawl, and purse seine](#) fisheries improvement project (FIP). We are participating in the FIP and will continue to source North East Atlantic mackerel while progress is being made. In the event that the NAPA FIP fails to achieve the desired outcome, ALDI will work with its suppliers to review sourcing options, including investigating alternative sourcing areas and species. We also call upon our business partners to support our efforts by joining NAPA and by engaging their business partners and networks where this has not happened yet.

Biomar

We find it promising that the Coastal States are following the scientific recommendations set by ICES for next year's Blue Whiting fishery. Now that the fishery has been approved for a Marin Trust FIP, BioMar will start to purchase Blue Whiting fishmeal and oil again. If, however the FIP should fail we will stop purchasing this material as we, our customers and stakeholders follow the highest ethical and sustainability standards. It is vital that an agreement on the distribution of quotas can be achieved in 2022 and we urge the Coastal States to find a resolution promptly to avoid any potential risks of overfishing and therefore failure of the current FIP.

Thai Union

Thai Union is committed to the continuous improvement in the sustainability of the raw materials within our products. We are working to ensure that all sourcing policies and actions related to fish procurement are responsible, market leading and supporting the seafood industry on its sustainability journey. One action we have taken is to be part of the steering committee of the "North Atlantic Pelagic Advocacy Group (NAPA)" where we collaborate with retailers and producers on the Northeast Atlantic mackerel and Atlanto-scandian herring fishery improvement project (FIP). Our products from these fisheries have been impacted by the suspension of the MSC certification, as they can no longer carry the MSC logo for sustainable seafood. This has come as a result of the continuing dispute over quota allocation which has allowed overfishing to continue.

We would like to state our support of the work of NAPA to engage with the Northeast Atlantic Fisheries Commission (NEAFC) Coastal States. The aim of this collaboration is to advocate to the fishing nations to ensure they and their representatives progress to agree quotas that line up with scientific advice and implement a long-term management plan for these fisheries which are shared between countries.

These fish species are important for several reasons; they are important to the overall health of the marine ecosystem in the North Atlantic; they are an important part of eating a healthy diet for consumers; and they are an important part of our business. Having sourced from these fisheries for many years we want to continue to work with our suppliers through this challenge. We also want to work with the other businesses and stakeholders to ensure that these species are considered to be sourced responsibly, showing that they are making progress towards regaining the MSC certification.

Thai Union will carry on sourcing mackerel and herring from this region as part of our responsible sourcing strategy and encourage progress to be made. We will review the outcomes of the engagement with coastal states and their decisions made on allocation. Once

the outcomes of these decisions are known, we will be better placed to further consider our future sourcing options.

M&S

Marks & Spencer is calling on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term, science-based management plan. As members of the North Atlantic Pelagic Advocacy Group (NAPA), and the associated Northeast Atlantic mackerel and Atlanto-scandian herring fishery improvement project (FIP) we are helping to advocate for these necessary changes.

Should the NAPA FIPs fail to deliver their intended outcomes, and fishing is allowed to continue at unsustainable levels, Marks & Spencer would be obliged at that time, to re-evaluate our purchasing decision for Northeast Atlantic mackerel and Atlanto-Scandian herring from FAO Area 27; we will not compromise on our sourcing policy, nor our customer's trust in our brand.

Orkla

Orkla is sourcing both mackerel and herring from FAO Area 27. We are very concerned about the lack of sustainable management for the North East Atlantic pelagic.

As a responsible acting producer, Orkla has set the goal to source 100% marine raw materials from sustainable sources. The lack of management plans for FAO27 makes this goal hard to reach. Thus, Orkla has decided to join the North Atlantic Pelagic Advocacy Group (NAPA) and is committed to supporting NAPA's action plans on the fishery improvement project (FIP) for Northeast Atlantic mackerel and Atlanto-scandian herring.

In the event that the NAPA FIP fails to achieve the desired outcome of agreed quotas in line with scientific advice and implementation of long-term science-based management plans, Orkla will review alternative sourcing areas and species.

Bio-marine Ingredients Ireland Ltd

Bio-marine Ingredients Ireland is part of the North Atlantic Pelagic Advocacy Group (NAPA) to lend our total support to the need for science-based management of our pelagic fisheries. As a company we focus exclusively on blue whiting and on that basis, we are particularly interested in progress being made with the MarinTrust improvement project for blue whiting. If progress

cannot be made by the North East Atlantic Fisheries Commission coastal states, we will have no choice but to significantly reduce our sourcing of blue whiting.

Hofseth Aqua AS

Hofseth Aqua is an aquaculture farmer and a seafood processing company with high environmental standards within our business and throughout the supply chain.

Our ASC and Global GAP certified farmed salmon and trout is dependent upon the availability of fish feed processed from MSC raw material.

We are seriously concerned by the fact that our governmental regulators have failed to reach an agreement over ICES advice to prevent negative impact on the wild stock. To ensure sustainable food production in generations to come, we strongly support the aim of the North Atlantic Pelagic Advocacy Group (NAPA) and the fishery improvement project (FIP).

Hofseth believes that we together with other companies, can contribute to a solution towards better management and harvesting strategy for our shared fisheries stocks. We maintain our commitment to work closely together with our feed supply chain, where sustainable sourcing of raw materials and the standards from NAPA and FIP are a common subject.

Bolton Group

Bolton Group is committed to increasing fish sourced from sustainable fisheries. We work to ensure that all our activities, and those of our business partners and suppliers, are entirely responsible to the raw material and to the people, as well as environmentally friendly throughout our supply chain.

The Business Unit Food of Bolton Group sources North East Atlantic mackerel (*Scomber scombrus*) from FAO area 27, but we are deeply concerned by the suspension of the MSC certification from these fisheries.

We are calling on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice and to implement long-term science-based management procedures.

To show Bolton Group's unequivocal support in this endeavour we have joined the North Atlantic Pelagic Advocacy Group (NAPA) to advocate for effective international agreement. We support NAPA's Northeast Atlantic mackerel and Atlanto-scandian herring Fishery

Improvement Project (FIP) as an adequate tool to help gaining MSC re-certification for these fisheries.

The final results of the FIP and the eventual MSC recertification of the fishery will be crucial factors allowing Bolton Group to re-evaluate its mackerel sourcing strategy and review sourcing options if progress falter or the FIP fails, without ruling out investigating possible sourcing from other areas or the use of alternative species while continuing to advocate for sustainable management of the fishery.

Ocean Brands

We are calling on the North East Atlantic Fisheries Commission (NEAFC) coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan for mackerel and herring.

To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) [Northeast Atlantic mackerel and Atlanto-scandian herring](#) fishery improvement plan (FIP) and will continue to source North East Atlantic mackerel while progress is being made.

Should progress falter, or the FIP fail, Ocean Brands will work with our supply partners to review sourcing options and continue to advocate for sustainable management of the fishery.

Island Seafoods Ltd.

We are calling on the North East Atlantic Fisheries Commission (NEAFC) coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan for mackerel and herring. To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) Northeast Atlantic mackerel and Atlanto-scandian herring fishery improvement plan (FIP) and will continue to source North East Atlantic mackerel while progress is being made. Should progress falter, or the FIP fail, we will cease sourcing North East Atlantic mackerel from FAO Area 27.

Woolworths (South Africa)

Woolworths has a dedicated seafood sustainability programme, "Fishing for the Future", to ensure that all our seafood is responsibly sourced for better food choices, thriving communities and sustainable oceans. Through the programme we are committed to sourcing seafood that has the most positive environmental, social and economic impacts possible and that strives to minimise adverse impacts.

Woolworths currently sources Atlantic mackerel and Atlantic herring from FAO Fishing Area 27 and as a member of the North Atlantic Pelagic Advocacy Group (NAPA), we are calling on the North East Atlantic Fisheries Commission (NEAFC) coastal states to agree quotas in line with scientific advice, and implement a long-term science-based management plan for mackerel and herring.

To advocate for change, Woolworths participates in the NAPA led Northeast Atlantic mackerel and Atlanto-scandian herring fishery improvement project (FIP). We intend to align our sourcing strategy with the FIP objectives and will only procure mackerel and herring from coastal states that support responsible management of the fisheries targeting these species.

Sæby

A/S Sæby Fiske-Industri sources mackerel from the North East Atlantic FAO Area 27. We are participating in the North Atlantic Pelagic Advocacy Group (NAPA) fishery improvement program (FIP) which calls on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan which all coastal states can apply to.

While we participate in NAPA we will continue to source from fisheries within the improvement programmes.. A/S Sæby Fiske-Industri will continue to source its branded products from Coastal States championing sustainability and will continue to advocate for sustainable management of the fishery.

We will only source from areas and fisheries who comply with the given quota from EU and not support overfishing done by some coastal states. For products packed for our partners under their private label, we will collaboratively engage with them and follow their requirements.

Schwaaner Fischwaren GmbH (Sywan)

Schwaaner Fischwaren is a manufacturer of fish products with a focus on "canned herring", but we also process Pacific salmon as well as tuna. For many years, we have attached importance to processing sustainably fished raw material with MSC certification.

The loss of MSC certification at the beginning of 2021 for herring from several important fishing areas in the Northeast Atlantic poses a great challenge to us and the market, not only because of the shortage of supply, but also because of the associated increase in the price of the raw material.

We urge the coastal states of the Northeast Atlantic Fisheries Commission (NEAFC) to agree on quotas consistent with scientific advice and to implement a long-term, science-based management plan. To promote this, we participate in the North Atlantic Pelagic Advocacy Group (NAPA), the Fishery Improvement Program for Mackerel and Atlantic-Scandian Herring (FIP).

Ahold Delhaize

Ahold Delhaize, through its brands Albert Heijn, Delhaize and Albert sources North East Atlantic mackerel, herring and blue whiting from FAO Area 27. It is our policy that the seafood we sell is either:

- Certified against a GSSI recognized standard
- In an improvement program
- Or otherwise assessed as sustainable.

However, generally speaking, our customers expect the products to be certified. We are therefore concerned by the suspension of the MSC certification from these fisheries.

We are calling on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan. To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) Northeast Atlantic mackerel and Atlanto-scandian herring fishery improvement programme (FIP).

We will continue to source North East Atlantic mackerel while progress is being made, as this is still within our policy. Should progress falter, or the FIP fail, we will have to cease sourcing North East Atlantic mackerel from FAO Area 27 and find alternative sources of certified product.

New England Seafood International

New England Seafood International (NESI) is calling on the North East Atlantic Fisheries Commission (NEAFC) coastal States to agree quotas for mackerel, blue whiting and herring in line with scientific advice. We also request that coastal States agree to long-term science-based management plans to ensure the long-term health of these key pelagic species.

NESI sources mackerel directly and blue whiting is a key feed ingredient for the farmed species in our supply chain. The sustainable management of these pelagic species is important to NESI for ensuring we can meet our responsible sourcing commitments, and those of our customers.

Accordingly, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) Northeast Atlantic mackerel and Atlanto-Scandian herring fishery improvement project (FIP) and the NE Atlantic blue whiting FIP. We will continue to source both species (directly and indirectly) while progress is being made. However, should progress falter, or the FIPs fail, we will review our sourcing and potentially only source from Coastal States or fisheries calling for the sustainable management of mackerel and blue whiting, in line with the asks of NAPA.

Havsbrún

Havsbrún is committed to produce, develop and maintain sustainable sources of raw materials.

We source from all three pelagic stocks in the North East Atlantic FAO Area 27, and blue whiting is our most important species.

We call on the Coastal States to follow ICES and NEAFC recommendations and implement long term and effective management plans for mackerel, herring and blue whiting.

Havsbrún has held meetings with the Faroese Prime Minister, Fishery Minister, Trade Minister and the Fishery and Trade Ministries to clarify our view on this matter.

We support the NAPA work with the Marin Trust blue whiting improver project and mackerel/herring FIP, but if the implementation should fail and not lead to the species' being fully approved as responsibly/sustainably caught again, we will have to review our sourcing policy.

Groupe Gendreau

We source North East Atlantic mackerel from FAO Area 27 but are concerned by the suspension of the MSC certification from these fisheries which our customers and consumers demand.

We are calling on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan.

To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) Northeast Atlantic mackerel and Atlanto-scandianherring fishery improvement programme (FIP) and will continue to source North East Atlantic mackerel while progress is being made.

Should progress falter, or the FIP fail, we will continue to advocate for sustainable management of the fishery but may need to review our sources, particularly should total catches continue to exceed ICES advice.

KARAVELA

KARAVELA currently sources mackerel and herring from FAO27, where we are concerned about the problem of overfishing by some coastal states mackerel and herring which ultimately led to the loss of MSC certification.

For our canned fish products which are packed for our partners under their private label, we will follow their requirements on sourcing standards.

We are calling on the North East Atlantic Fisheries Commission (NEAFC) Coastal states to agree quotas in line with ICES advice, to prevent further overfishing and implement a science-based management plan.

We are interested in the FIP initiated by NAPA so that mackerel and herring fisheries can become sustainable again and could regain MSC certification. We will continue to source North East Atlantic mackerel and herring while progress is made.

Should the FIP fail, we will work with our partners to review sourcing options or include new sourcing areas or species.

Associated Seafoods Ltd

Associated Seafoods Ltd are calling on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan. To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) Northeast Atlantic mackerel and Atlanto-Scandian herring Fishery Improvement Programme (FIP) and will continue to source key species whilst progress is being made.

Furthermore, we understand the importance of the sustainability of all feed ingredients in aquaculture supplied into us and will remain in open dialogue with our supply partners on their alignment with the aims of the NAPA Fishery Improvement Project.

Should the NAPA FIPs fail to deliver their intended outcomes, and fishing is allowed to continue at unsustainable levels, ASL would be obliged at that time, to re-evaluate purchasing decisions for affected species.

Roach Bros (Curers) Ltd

Roach Bros (Curers) Ltd source all of our mackerel from the North East Atlantic (FAO Area 27). We are therefore calling on the North East Atlantic Fisheries Commission (NEAFC) coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan for mackerel and herring. To encourage this, we are participating in the North Atlantic Pelagic Advocacy Group (NAPA) Northeast Atlantic mackerel and Atlanto-scandian herring fishery improvement plan (FIP) and will continue to source North East Atlantic mackerel while progress is being made. In the event that the NAPA FIP fails to achieve a desired outcome, we will work with our customers to review the position at that time and consider what sourcing options are available.

Arctic Seafood

Arctic Seafood GmbH sells smoked fish products with a focus on smoked salmon products and smoked mackerel. We obtain mackerel from the fishing area FAO 27. We supply all large supermarket chains throughout Germany and in some other European countries. The loss of the MSC certificate for mackerel faces us with new challenges.

Our customers are increasingly asking for fish products from sustainable fisheries or aquaculture. Our company cannot meet this demand in the mackerel sector in the long term due to the loss of the MSC certificate.

We, Arctic Seafood GmbH, call on the NEAFC coastal states to agree on fishing quotas in line with scientific advice and to promote a long-term science-based management plan for mackerel. To encourage this, we participate in NAPA. If the FIP developed by NAPA fails, we fear serious consequences for the success of our and our affiliated companies.

Simplot Australia P/L

We source our mackerel from the North East Atlantic FAO Area 27. We are participating in the North Atlantic Pelagic Advocacy Group (NAPA) fishery improvement program (FIP) which calls on the North East Atlantic Fisheries Commission (NEAFC) Coastal States to agree quotas in line with scientific advice, and implement a long-term science-based management plan.

Whilst we participate in NAPA we will continue to source North East Atlantic Mackerel but only from coastal states that are not setting unilateral quotas and are not involved in operations catching mackerel in international waters. If progress falters or the FIP fails, we will continue to advocate for sustainable management of the fishery and will review our position, whilst in the meantime ensuring we continue to source our mackerel from Coastal States championing sustainability.

Scottish Sea Farms

Scottish Sea Farms is actively committed to working with supply chains to provide and maintain sustainable sources of raw materials. As such, we were disappointed, in 2019, when some North East Atlantic Fisheries lost their Marine Stewardship Council (MSC) certification.

'As a company, we will not purchase feed containing marine ingredients from non-certified fisheries, and are keen that the FIPs developed by NAPA are successful and lead these same fisheries to regain their MSC certification as quickly as possible.

'Should progress be delayed, or should the FIPs fail, we will maintain our position not to purchase feed containing marine ingredients from non-certified fisheries. Therefore, we urge the NEAFC coastal states to agree quotas in line with scientific advice and to implement long-term science-based management plans. We will continue to support NAPA, advocate for sustainable management of fisheries, and maintain our sourcing position regarding these matters.

Sainsburys

At Sainsbury's, we're committed to our Plan for Better – Better for you, Better for the planet and Better for everyone. Sourcing from fisheries that are certified as sustainable and well managed is a key part of our Plan for Better and, as such, we are extremely concerned about the lack of a long-term management plan for North East Atlantic Pelagic fisheries. We strongly encourage the North East Atlantic Fisheries Commission (NEAFC) coastal states to agree quotas for Mackerel, Atlanto-Scandian Herring and Blue Whiting in line with scientific advice and to implement a long-term science-based management plan for these fisheries. Should this process fail to deliver, at the expense of the long-term health of these fish stocks, Sainsbury's would have review our sourcing, in line with our sustainable sourcing policy. North East Atlantic pelagic fish offer an incredibly nutritious and low carbon protein source to the world; let's make sure this continues sustainably for generations to come.
