| Outcome of Assessment                        |  |
| <b>Peer Review Evaluation</b>                | Agree with the assessor's recommendation   |
| <b>Recommendation</b>                        | <b>APPROVED</b>  |

**TABLE 2. ASSESSMENT DETERMINATION**

| <b>Assessment Determination</b>   |
|---|
| <p>If any species is categorised as Endangered or Critically Endangered on IUCN’s Red List, or if it appears in the CITES appendices, it cannot be approved for use as MarinTrust raw material. Sole (<i>Solea solea</i>) does not appear as Endangered or Critically Endangered on IUCN’s Red List, nor does it appear in CITES appendices, therefore, Sole (<i>Solea solea</i>) is eligible for approval for use as MarinTrust by-product raw material.</p> <p>The European Parliament and the European Council have published a multiannual management plan (MAP) for the Western Waters (EU, 2019). This plan applies to demersal stocks, including sole in Division 7.d. The MAP stipulates that when the FMSY ranges are not available, the precautionary approach should be applied. Therefore, the species is subject to a species-specific management plan and is assessed under Category C.</p> <p>Fishery removals of the stock are considered in the various stock assessment processes so the stock <b>PASSES</b> Clause C1.1.</p> <p>For Sole (<i>Solea solea</i>) in the assessment area the most recent estimated spawning stock biomass (SSB) is likely to be above reference points, the stock <b>PASSES</b> Clause C1.2.</p> <p>In order to be approved, the stock assessed must pass both Clause C1.1 and C1.2; therefore, Sole, <i>Solea solea</i> in Division 7.d (eastern English Channel) is <b>APPROVED</b> by the assessor for the production of fishmeal and fish oil under the current MarinTrust v 2.0 by-products standard.</p> |
| <b>Peer Review Comments</b>   |
| <p>The assessor correctly classified eastern English Channel sole stock as category C, the stock is managed and reference points are defined to assess the stock status against.</p> <p>Fishery removals from the stock are considered in the stock assessment process. The most recent stock assessment shows that the stock is considered to have a biomass above the limit reference point.</p> <p>The eastern English Channel sole passes both C1.1 and C1.2 and is therefore approved.</p>   |
| <b>Notes for On-site Auditor</b>  |
| Empty space for on-site auditor notes   |

## SPECIES CATEGORISATION

**NB:** If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as an MARINTRUST raw material.

### IUCN Redlist Category

Byproduct material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

Byproduct material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

TABLE 3 SPECIES CATEGORISATION TABLE

| Common name | Latin name         | Stock                                 | Management     | Category | IUCN Red List Category <sup>1</sup> | CITES Appendix 1 <sup>2</sup> |
|-------------|--------------------|---------------------------------------|----------------|----------|-------------------------------------|-------------------------------|
| Sole        | <i>Solea solea</i> | Division 7d (eastern English Channel) | EU/CFP, France | C        | DD                                  | No                            |

## CATEGORY C SPECIES

In a by-product assessment, Category C species are those which are subject to a species-specific management regime and are usually targeted species in fisheries for human consumption.

Clause C1 should be completed for **each** Category C species. If there are no Category C species in the fishery under assessment, this section can be deleted. Where a species fails this Clause, it may be assessed as a Category D species instead, EXCEPT if there is evidence that it is currently below the limit reference point.

| Species Name |   | Sole, <i>Solea solea</i>   |
|--------------|---|--|
| C1           | <b>Category C Stock Status - Minimum Requirements</b> |  |
|              | C1.1  | Fishery removals of the species in the fishery under assessment are included in the stock assessment process, OR are considered by scientific authorities to be negligible.  |
|              | C1.2  | The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible. |
|              |   | <b>Clause outcome:</b> PASS  |

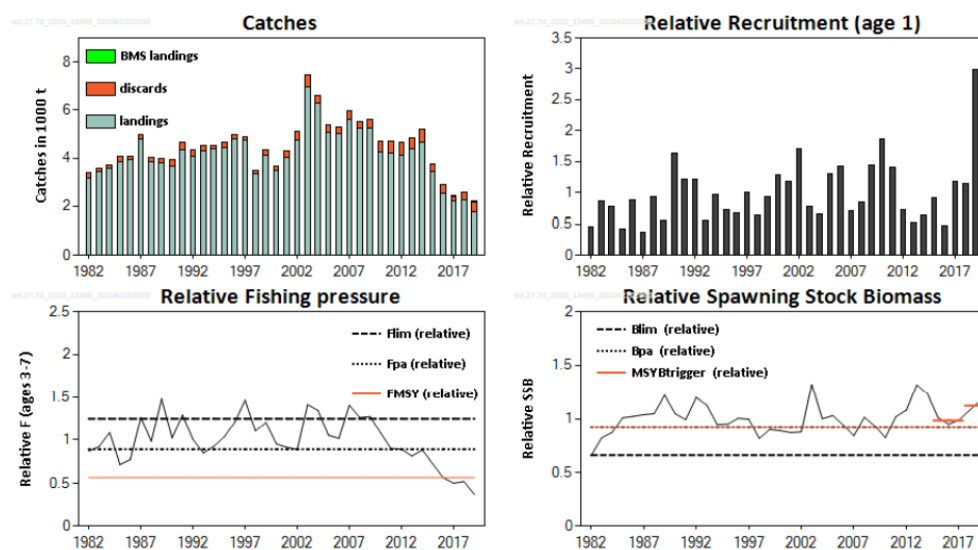

**C1.1 Fishery removals of the species in the fishery under assessment are included in the stock assessment process, OR are considered by scientific authorities to be negligible.**

The data used in the stock assessment are defined as follows: sampling by métier; 3 survey indices: UK(E&W)-BTS, UK(E&W) YFS, and FR-YFS; 3 commercial indices: BE-CBT, FR-COT, and UK(E&W)-CBT; natural mortality is assumed to be constant; maturity-at-age data vary with age (ICES, 2017). Discards, BMS landings and bycatch are included in the assessment. Discards (1982–2003) are reconstructed and combined with the landings as input in the model. In 2019, 73% of the landings had associated discarding information and 44% of the discards were sampled.

Therefore, fishery removals of the species in the fishery under assessment are included in the stock assessment process and the fishery **PASSES** clause C1.1

**C1.2 The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible.**

The spawning–stock biomass (SSB) has been fluctuating without a trend and has been above MSY Btrigger since 2010. Fishing pressure (F) has shown a decreasing trend since 2009 and has been below FMSY since 2016. Recruitment has been fluctuating without a trend. In 2019, the recruitment was estimated to be the highest of the time-series. (Figure 1).

**Figure 1.** Sole in Division 7.d. Summary of the stock assessment. Recruitment, F, and SSB values are relative to the average of the time-series. The short orange lines in the relative SSB plot indicate the average values of the respective years

(2015–2017 and 2018–2019). Landings below minimum conservation reference size (BMS) are those officially reported..  
Source: ICES 2020

Consequently, looking at the ICES 2020 stock assessment, fishing pressure is below FMSY proxy, Fpa, and Flim; spawning-stock biomass above MSY Btrigger proxy and above Bpa and Blim.

Therefore, the species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy) and it **PASSES** clause C1.2.

## SOCIAL CRITERION

In addition to the scored criteria listed above, applicants must commit to ensuring that vessels operating in the fishery adhere to internationally recognised guidance on human rights. They must also commit to ensuring there is no use of enforced or unpaid labour in the fleet(s) operating upon the resource.

## Appendix B: From MARINTRUST Standard V2.0 Annex 2: Fish By-product Assessment Methodology

### Definition of a Fish By-product

A by-product is a useful and marketable product that is not the primary product being produced. A marketable by-product is from a process that can technically not be avoided. This includes materials that may be traditionally defined as waste such as industrial scrap that is subsequently used as a raw material in a different manufacturing process.

"Fish By-products" refers to commodities that are manufactured from fish, including shellfish, and crustaceans in a form that is different than conventional foods and which are intended for human consumption (either directly or as a food ingredient). Fish By-products include, but are not limited to:

- By-products derived from fish, including fish cartilage, fish oils, and fish proteins; and
- By-products derived from the carapaces of crustaceans; but do not include marine plants or marine plant products.

(Canadian Food Inspection Agency Definition)

In addition, a whole fish which is rejected on an intrinsic quality ground e.g. does not meet the specification for human consumption due to physical damage or the quality is substandard. These whole fish shall in these cases be classified as a by-product from the human consumption fishery, and can be used for marine ingredients production.

A whole catch of fish that is rejected by a fish processing factory on economic grounds is not considered to be a fish by-product. This fish can only be used for marine ingredients production if the fishery has been assessed and approved under the requirements of the IFFO Responsible Sourcing Standard.

### Why utilise Fish By-products?

#### FAO Code of Conduct for Responsible Fisheries

##### General Principles Article 6

**6.7** The harvesting, handling, processing and distribution of fish and fishery products should be carried out in a manner which will maintain the nutritional value, quality and safety of the products, reduce waste and minimize negative impacts on the environment.

##### Responsible fish utilisation Article 11.1

**11.1.8** States should encourage those involved in fish processing, distribution and marketing to reduce post-harvest losses and waste.

#### Benefits of Including Fish By-Products in the MARINTRUST Standard:

1. Improved fish resource utilisation
2. Reduction in waste for nutritional value
3. 35% of fish by-products are currently used to make quality fishmeal and oil
4. Excellent Economic return
5. Better compliance with FAO Code of Conduct for Responsible Fisheries

#### What Fish By-products cannot be used?

## 1. IUCN

Fishery By-products shall Not be taken from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for certain categories;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

Fish By-product material may be used from the vulnerable category, but it shall incur a fishery surveillance conducted by the certification body prior to it being included in the scope of this standard.

- VULNERABLE (VU) facing a high risk of extinction in the wild.

The Fish By-product material from these species will be acceptable for use in the scope of this standard;

- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.

Fish By-product material may be used from the following category, but it shall incur a fishery surveillance prior to it being included in the scope of this standard;

- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

The fishery surveillance conducted by the certification body will review the following areas:

### Stock Assessment

- From a recognised Institution
- Fisheries are recognised as legal
- Fisheries do not contradict scientific opinion

## 2. FAO Code of Conduct for Responsible Fisheries

In addition the Fish By-products shall not come from fisheries that do not comply with the following criteria;

1. Fisheries should prohibit dynamiting, poisoning and other comparable destructive fishing practices.
2. Fishery material shall not be from IUU fishing activity nor sourced from vessels officially listed as engaging in illegal, unreported and unregulated (IUU) fishing activity.
