Key Contact:		Title:					
Certification Body Details							
Name of Certification	Body:	Global Trust Certification					
Assessor	Peer Reviewer	Assessment Days	Initial/Surveillance/ Re-approval				
Geraldine Criquet Virginia Polonio		0.5					
Assessment Period May 2021							

Scope Details				
Main Species	Saithe, Pollachius virens			
Stock	Saithe in ICES Division 5.b (Faroes grounds)			
Fishery Location	FAO Area 27 Atlantic Northeast ICES Division 5.b (Faroes grounds)			
Management Authority	EU/Common Fisheries Policy and Denmark			
(Country/ State)	Lo/Common risheries Folicy and Deminark			
Gear Type(s)	Trawls			
Outcome of Assessment				
Peer Review Evaluation	Agree with assessor's determination			
Recommendation	APPROVED			

Table 2. Assessment Determination

Assessment Determination

If any species is categorised as Endangered or Critically Endangered on IUCN's Red List, or if it appears in the CITES appendices, it cannot be approved for use as MARIN TRUST raw material. Saithe (*Pollachius virens*) is not listed as Endangered or Critically Endangered on IUCN's Red List, nor it is listed in CITES appendices. Therefore, saithe (*Pollachius virens*) in ICES Division 5.b (Faroes grounds) is eligible for approval for use as MARIN TRUST by-product raw material.

Saithe in ICES Division 5.b is subject to specific management, an effort management system has been in place since 1996a, and reference points are available to assess the stock status relative to. Therefore, the stock is categorised as Category C.

Fishery removals of the stock are considered in the various stock assessment processes so it **PASSES** Clause C1.1.

According the most recent ICES advice, the spawning stock biomass is above B_{lim} and MSYB_{trigger}, it **PASSES** Clause C1.2.

In order to be approved, the stock under assessment must pass both Clauses C1.1 and C1.2. Saithe (*Pollachius virens*) in ICES Division 5.b (Faroes grounds) passes both Clauses C1.1 and C1.2, and therefore is APPROVED by the assessor for the production of fishmeal and fish oil under the current Marin Trust v.2.0 by-product Standard.

Fishery Assessment Peer Review Comments

The stock has a species-specific management plan and therefore it has been correctly categorised following Marin Trust guidelines. The removals of the stock are considered in the stock assessment and the stock is above biomass reference points in the most stock assessment from 2020.

The PR agrees with the assessor's determination and Saithe (*Pollachius virens*) in ICES Division 5.b (Faroes grounds) is approved for the production of fishmeal and fish oil under the current Marin Trust v.2.0 by-product Standard.

Notes for On-site Auditor		
	-	

Species Categorisation

NB: If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as an MARINTRUST raw material.

IUCN Red list Category

By-product material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

By-product material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

Table 3 Species Categorisation Table

Common name	Latin name	Stock	Management	Category	IUCN Red List Category ¹	CITES Appendix 1 ²
Saithe	Pollachius virens	Saithe in ICES Division 5.b (Faroes grounds)	*	С	LC	No

CATEGORY C SPECIES

In a whole fish assessment, Category C species are those which make up less than 5% of landings, but which are subject to a species-specific management regime. In most cases this will be because they are a commercial target in a fishery other than the one under assessment.

Clause C1 should be completed for **each** Category C species. If there are no Category C species in the fishery under assessment, this section can be deleted. Where a species fails this Clause, it should be assessed as a Category D species instead.

Spe	ecies	Name	Saithe, Pollachius virens				
C1	Category C Stock Status - Minimum Requirements						
CI	C1.1 Fishery remo		ovals of the species in the fishery under assessment are included in the stock assessment	PASS			
	process, OR are considered by scientific authorities to be negligible.						
	C1.2 The species is considered, in its most recent stock assessment, to have a biomass above the limit		PASS				
	reference point (or proxy), OR removals by the fishery under assessment are considered by scientific						
	authorities to be negligible.						
			Clause outcome:	PASS			

C1.1 Fishery removals of the species in the fishery under assessment are included in the stock assessment process, OR are considered by scientific authorities to be negligible.

Commercial catches (mainly Faroes catches, ages and length frequencies from catch sampling) are included in the stock assessment process. Figure 1 shows catches for the 1961-2019 period.

Therefore, the stock **PASSES** Clause C1.1.

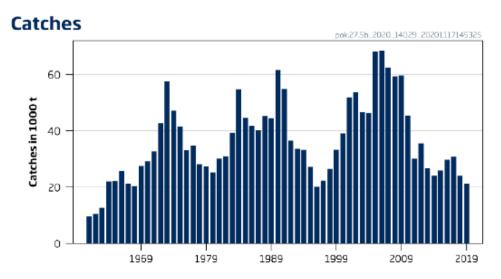

Figure 1. Catches of saithe in ICES Division 5.b. Source: ICES 2020

C1.2 The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible.

The most recent ICES advice was published in November 2020. In 2020, the SSB was above B_{lim} and MSYB_{trigger} (Figure 2 and Table 4). The stock is at its full reproductive capacity. Therefore, it **PASSES** Clause C1.2
