## Table 2. Assessment Determination

#### **Assessment Determination**

If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in the CITES appendices, it cannot be approved for use as Marin Trust raw material. Plaice (*Pleuronectes platessa*) does not appear as Endangered or Critically Endangered on the IUCN Red List, nor does it appear in the CITES appendices; therefore, plaice (*Pleuronectes platessa*) in ICES Division 7.a (Irish Sea) is eligible for approval for use as Marin Trust raw material.

There is a species-specific management regime in place for this stock including a stock assessment with reference points defined and a TAC set and therefore, the stock was assessed under Category C.

In the last stock assessment, removals are considered, and the stock is above B<sub>lim</sub> and MSY B<sub>trigger</sub>, therefore the fishery PASSES clauses C1.1 and C1.2.

Plaice (*Pleuronectes platessa*) in ICES Division 7.a (Irish Sea) is APPROVED for the production of fishmeal and fish oil under the Marin Trust Standard v.2.

Fishery Assessment Peer Review Comments

The assessor correctly classified plaice (*Pleuronectes platessa*) in ICES Division 7.a (Irish Sea) as category C, this stock is managed, and reference points are defined.

Fishery removals are considered in the stock assessment process. The most recent stock assessment shows that the stock is above  $B_{lim}$  and MSY  $B_{trigger}$ . Therefore, the stock is considered to have a biomass above the limit reference point.

Plaice (Pleuronectes platessa) in ICES Division 7.a (Irish Sea) passes both Clauses C1.1 and C1.2 and is therefore approved under the Marin Trust Standard v.2.

**Notes for On-site Auditor** 

None.

## **Species Categorisation**

**NB:** If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as an MarinTrust raw material.

#### **IUCN Red list Category**

By-product material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

By-product material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

## CATEGORY C SPECIES

In a by-product assessment, Category C species are those which are subject to a species-specific management regime and are usually targeted species in fisheries for human consumption.

Clause C1 should be completed for each Category C species. If there are no Category C species in the fishery under assessment, this section can be deleted. Where a species fails this Clause, it should be assessed as a Category D species instead.

| Spe       | ecies  | Name                           | Plaice ( <i>Pleuronectes platessa</i> ) in ICES Division 7.a (Irish Sea)   |            |
|-----------|--------|--------------------------------|--|------------|
| <b>C1</b> | Catego | or <mark>y C Stock S</mark> ta | atus - Minimum Requirements  |            |
| CI        | C1.1   | -                              | ovals of the species in the fishery under assessment are included in the stock assessment are considered by scientific authorities to be negligible.   | Yes        |
|           | C1.2   | reference po                   | is considered, in its most recent stock assessment, to have a biomass above the limit<br>pint (or proxy), OR removals by the fishery under assessment are considered by scientific<br>o be negligible. | Yes        |
|           |        |                                | Clause outcome:  | PASS       |
|           | -      |                                | he species in the fishery under assessment are included in the stock assessment proce<br>thorities to be negligible.   | ss, OR are |

The stock is assessed using an age-based analytical assessment (SAM) that uses landings and discards in the model and in the forecast (ICES, 2021). Input data includes commercial catch-at-age data; three survey indices UK (E&W)-BTS-Q3 (B6596), NIGFS-WIBTS-Q1 (G7144), and NIGFS-WIBTS-Q4 (G7655). Fishery removals of the species in the fishery under assessment are included in the stock assessment process and the species **PASSES** clause C1.1.

C1.2 The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible.

Biomass reference points are defined for this stock and in its most recent assessment the stock is above its limit reference point, B<sub>lim</sub>, and also MSY B<sub>trigger</sub> (see figure below). Therefore, the stock has a biomass above the limit reference point and **PASSES** clause C1.2.

### CATEGORY D SPECIES

Category D species are those which are not subject to a species-specific management regime. In the case of mixed trawl fisheries, Category D species may make up the majority of landings. The comparative lack of scientific information on the status of the population of the species means that a risk-assessment style approach must be taken.
