Scope Details	
Main Species	Sprat, Sprattus sprattus
Stock	Sprat in ICES Subarea 6 and divisions 7.a-c and 7.f-k
Fishery Location	West of Scotland and Southern Celtic Seas
Management Authority (Country/ State)	UK & EU
Gear Type(s)	Midwater trawl
Outcome of Assessment	
Peer Review Evaluation	Pass
Recommendation	Approve byproduct

Table 2. Assessment Determination

Assessment Determination

Sprat has been categorised by the IUCN Red List as Least Concern, and does not appear in the CITES appendices. Although an annual catch recommendation is produced by ICES, it is not possible to "assess the stock and exploitation status relative to maximum sustainable yield (MSY) and precautionary approach (PA) reference points because information to define reference points is not available". As no reference points are defined for this stock, it was assessed under Category D.

Sprat was awarded a Productivity Score of 1.14 and a Susceptibility Score of 2.5, leading to a Pass rating on Table D3. For this reason, the byproduct should remain approved for use as a raw material.

Fishery Assessment Peer Review Comments

The by-product fishery under assessment is the European sprat (*Sprattus sprattus*) caught with midwater trawls in ICES Subarea 6 and divisions 7.a—c and 7.f—k (West of Scotland and Southern Celtic Seas), FAO area 27. No reference points have been defined for this stock by ICES. Therefore, the stock is assessed under category D and a productivity susceptibility analysis (PSA) is undertaken.

The stock awards a Productivity Score of 1.14 and a Susceptibility Score of 2.5, leading to a Pass rating on Table D3.

The peer review supports the auditor's recommendation to pass the European sprat caught with midwater trawls in ICES Subarea 6 and divisions 7.a—c and 7.f—k under the Marin Trust IFFO RS v2.0 by-fishery standard for the production of fishmeal and fish oil.

Notes for On-site Auditor

Species Categorisation

NB: If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as an MarinTrust raw material.

IUCN Red list Category

By-product material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

By-product material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

CATEGORY C SPECIES

In a by-product assessment, Category C species are those which are subject to a species-specific management regime and are usually targeted species in fisheries for human consumption.

Clause C1 should be completed for each Category C species. If there are no Category C species in the fishery under assessment, this section can be deleted. Where a species fails this Clause, it should be assessed as a Category D species instead.

Spe	ecies	Name	n/a	
<u>C1</u>	Categ	ory C Stock Sta	atus - Minimum Requirements	
CI	C1.1	•	ovals of the species in the fishery under assessment are included in the stock assessment are considered by scientific authorities to be negligible.	
	C1.2	reference po	s considered, in its most recent stock assessment, to have a biomass above the limit int (or proxy), OR removals by the fishery under assessment are considered by scientific be negligible.

CATEGORY D SPECIES

Category D species are those which are not subject to a species-specific management regime. In the case of mixed trawl fisheries, Category D species may make up the majority of landings. The comparative lack of scientific information on the status of the population of the species means that a risk-assessment style approach must be taken.

Species Name		Sprat		
Productivity Attribut		Value	Score	
Average age at maturity (years)	1	5 years	1	
Average maximum age (years)	5	5.2 years	1
