

## MarinTrust Standard V2

### By-product Fishery Assessment

### IND03 - Yellowfin tuna

### *(Thunnus albacares)*

### in FAO 71

**Table 1 Application details and summary of the assessment outcome**

Fishery Under Assessment	Species:	Yellowfin tuna ( <i>Thunnus albacares</i> )
	Geographical area:	FAO 71 - Western Central Pacific
	Country of origin of the product:	Indonesia
	Stock:	Western central Pacific yellowfin tuna
Date	April 2024	
Report Code	IND03	
Assessor	Ana Elisa Almeida Ayres	
Country of origin of the product - PASS	Indonesia	
Country of origin of the product - FAIL	N/A	

Application details and summary of the assessment outcome			
Company Name(s): PT. Pahala Bahari Nusantara			
Country: Indonesia			
Email address:		Applicant Code:	
Certification Body Details			
Name of Certification Body:		NSF / Global Trust Certification Ltd.	
Assessor	Peer Reviewer	Assessment Days	Initial/Surveillance/Re-approval
Ana Elisa Almeida Ayres	Léa Lebechnech	0.5	Initial
Assessment Period		April 2024 – April 2025	

Scope Details	
Main Species	Yellowfin tuna ( <i>Thunnus albacares</i> )
Stock	Western central Pacific yellowfin tuna
Fishery Location	FAO 71 Western Central Pacific
Management Authority (Country/ State)	Western and Central Pacific Fisheries Commission (WCPFC)
Gear Type(s)	Longline, pole & line, and purse seine
Outcome of Assessment	
Peer Review Evaluation	Agree with the assessor's determination
Recommendation	APPROVED

**Table 2. Assessment Determination**

Assessment Determination
<p>If any species is categorised as Endangered or Critically Endangered on Union for Conservation of Nature's Red List of Threatened Species - IUCN's Red List, or if it appears in the Convention on International Trade in Endangered Species of Wild Fauna and Flora - CITES appendices, it cannot be approved for use as Marin Trust raw material. <i>Thunnus albacares</i> - yellowfin tuna is not categorised as Endangered or Critically Endangered on IUCN's Red List and does not appear in CITES appendices; therefore, <i>Thunnus albacares</i> - yellowfin is eligible for approval for use as Marin Trust by-product raw material.</p> <p>Yellowfin tuna in the western central Pacific Ocean (WCPO; west of 150° W) is considered to comprise a single stock for assessment and management purposes; therefore, this assessment covers that stock when fished in FAO Area 71. The last stock assessment was performed in August 2023 by the Western and Central Pacific Fisheries Commission (WCPFC).</p> <p>Fishery removals of the stock are considered in the stock assessment process, so the stock PASSES Clause C1.1. Stock biomass is considered to be above the limit reference point, thus it PASSES Clause C1.2.</p> <p>Therefore, <i>Thunnus albacares</i> - yellowfin tuna in FAO 71 is APPROVED for the production of fishmeal and fish oil under the current MarinTrust v2.3 by-products standard.</p>
Fishery Assessment Peer Review Comments
<p>The assessor correctly yellowfin tuna (<i>Thunnus albacares</i>) in FAO 71 (Western central Pacific Ocean) under Category C, the stock being subject to a specific management regime and reference points are defined.</p> <p>Fishery removals are considered in the stock assessment process and the most recent stock assessment shows that the stock is above limit reference point. Therefore, the stock is considered to satisfy C1.1. and C1.2.</p> <p>In conclusion, Western central Pacific Ocean yellowfin tuna passes both clauses (C1.1 and C1.2) and therefore should be approved under the MarinTrust Standard v2.3.</p>
Notes for On-site Auditor
N/A

## Species Categorisation

**NB:** If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as a MarinTrust raw material.

### IUCN Red list Category

By-product material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

By-product material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

## Table 3 Species Categorisation Table

Common name	Latin name	Stock	Management	Category	IUCN Red List Category <sup>1</sup>	CITES Appendix 1 <sup>2</sup>
Yellowfin tuna	<i>Thunnus albacares</i>	Western central Pacific yellowfin tuna	Yes	C	Least Concern <sup>3</sup>	No

<sup>1</sup> <https://www.iucnredlist.org/>

<sup>2</sup> <https://cites.org/eng/app/appendices.php>

<sup>3</sup> <https://www.iucnredlist.org/species/21857/46624561>

## CATEGORY C SPECIES

In a by-product assessment, Category C species are those which are subject to a species-specific management regime and are usually targeted species in fisheries for human consumption.

Clause C1 should be completed for each Category C species. If there are no Category C species in the fishery under assessment, this section can be deleted. Where a species fails this Clause, it should be assessed as a Category D species instead.

Species Name		Yellowfin tuna ( <i>Thunnus albacares</i> )	
C1	Category C Stock Status - Minimum Requirements		
	C1.1	Fishery removals of the species in the fishery under assessment are included in the stock assessment process, OR are considered by scientific authorities to be negligible.	PASS
	C1.2	The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible.	PASS
			Clause outcome: PASS
<p><b>C1.1 Fishery removals of the species in the fishery under assessment are included in the stock assessment process, OR are considered by scientific authorities to be negligible.</b></p> <p>The last stock assessment of yellow tuna in the western and central Pacific Ocean (WCPO; west of 150° W) was performed in August 2023 by the Western and Central Pacific Fisheries Commission (WCPFC). The stock assessment was based on a general approach of integrated modelling using the MULTIFAN-CL4 (MFCL version number 2.2.x.0) framework. MFCL implements a size-based, age- and spatially structured population model. Each new assessment of the stock typically involves updates to fishery catch (Figure 1), effort, and size composition data, updates to tag-recapture data when tagging data is used, implementation of new features in the MFCL modelling software, changes to preparatory data analysis, such as Catch Per Unit Effort - CPUE standardisations, and consideration of new information on biology, population structure and potentially other population parameters (WCPFC, 2023).</p>			

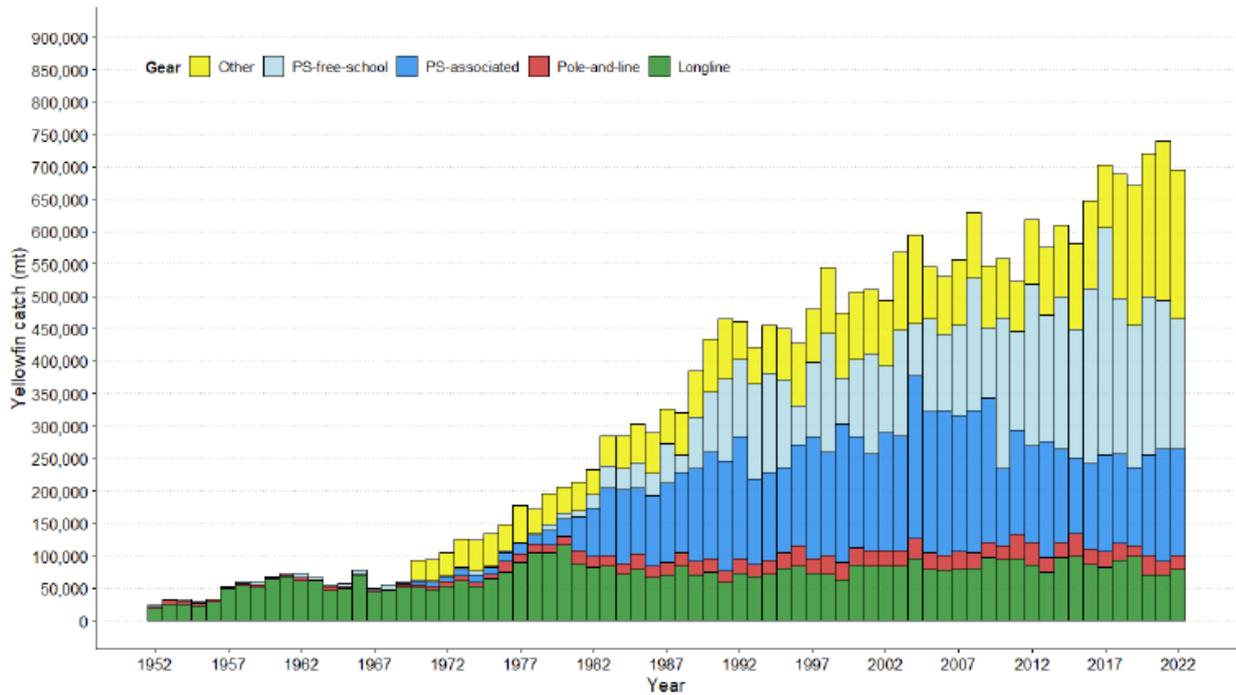

Figure 3: Annual catches of yellowfin by gear type in the WCPO area covered by the assessment.

Figure 1. Source: WCPFC (2023).

Therefore, fishery removals are incorporated into the stock assessment process, the fishery achieves a PASS against C1.1.

**C1.2 The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible.**

Overall, median depletion of yellow tuna in WCPO for the recent period (2018–2021;  $S_{Brecent}/S_{BF=0}$ ) is estimated at 0.47 (80 percentile range including estimation and structural uncertainty 0.42–0.52, full range 0.33–0.60) and no models estimate the stock to be below the Limit Reference Point - LRP of  $20\%S_{BF} = 0$ . The recent (2017–2020) median fishing mortality ( $F_{recent}/F_{MSY}$ ) was 0.50 (80 percentile range, including estimation and structural uncertainty 0.41–0.62, full range 0.26–0.78). WCPFC concluded that the stock is not overfished, nor undergoing overfishing (Figure 2).

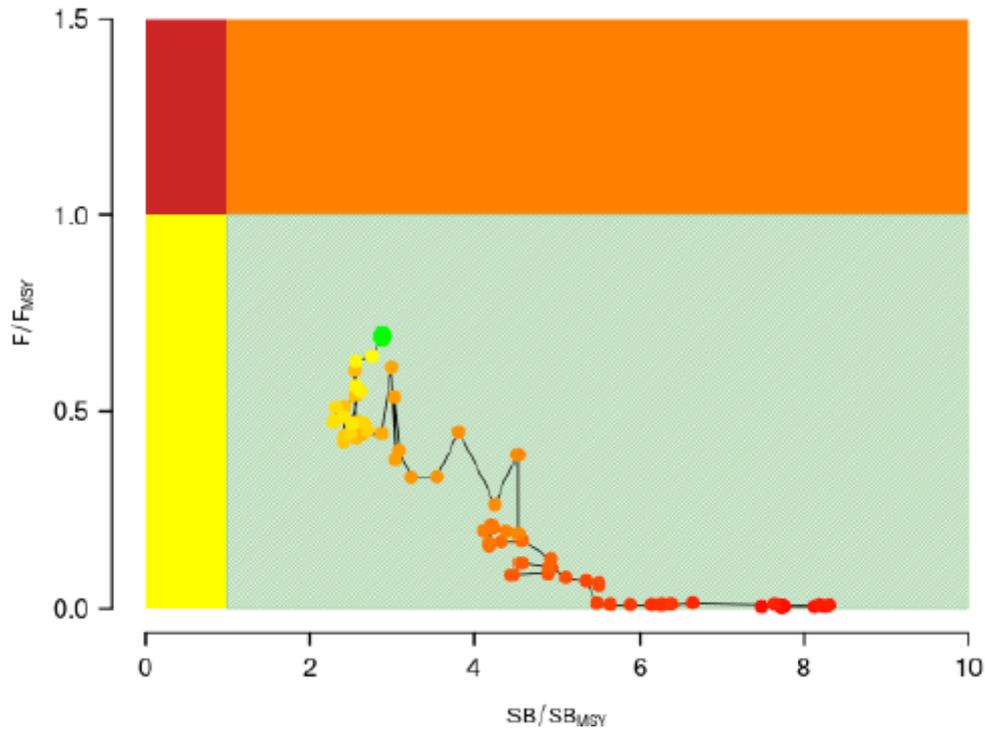

Figure 2. Kobe plot summarising the results for the diagnostic case model over the model period. The green point is the estimated 2021 status, the redder the point the further back in time (WCPFC, 2023).

Therefore, the species is considered, in its most recent stock assessment, to have a biomass above the limit reference point, the fishery achieves a PASS against C1.2.
