| Assessment Period   | ssessment Period Up to September 2022 |                    |                                      |  |  |

| Scope Details                         |   |  |  |  |
|---------------------------------------|---|--|--|--|
| Main Species                          | Cod (Gadus morhua)  |  |  |  |
| Stock                                 | Cod in FAO 27 Division 5.a (Icelandic Grounds)  |  |  |  |
| Fishery Location                      | FAO 27 Northeast Atlantic   |  |  |  |
| Management Authority (Country/ State) | Icelandic Ministry of Industries and Innovation   |  |  |  |
| Gear Type(s)                          | 2021 Estimates: Bottom Trawl (53%), Longline (27%), Gillnet (7%), Demersal Seine (7%), Jigging (6%) |  |  |  |
| Outcome of Assessment                 |   |  |  |  |
| Peer Review Evaluation                | Evaluation Agree with the assessor's recommendation of approval                                     |  |  |  |
| Recommendation                        | on APPROVED   |  |  |  |

#### Table 2. Assessment Determination

#### **Assessment Determination**

If any species is categorised as Endangered or Critically Endangered on IUCN's Red List, or if it appears in the CITES appendices, it cannot be approved for use as Marin trust raw material. Cod (*Gadus morhua*) does not appear as Endangered or Critically Endangered on IUCN's Red List, nor do they appear in CITES appendices; therefore, *Gadus morhua* is eligible for approval for use as Marin trust by-product raw material.

The Icelandic Ministry of Industries and Innovation has a management plan for Icelandic cod. The plan, which aims to providing maximum sustainable yield, was re-evaluated by ICES, found to be consistent with both the precautionary principle and ICES MSY approach. The stock is subject to a specific management regime and reference points are defined, therefore it was assessed under Category C.

Fishery removals are included in the stock assessment and it PASSES Clause C1.1. The stock is considered, in its most recent stock assessment, to have biomass above the limit reference point, it PASSES Clause C1.2.

Therefore, cod in Division 5.a (Icelandic Grounds) is **APPROVED** for the production of fishmeal and fish oil under the current MarinTrust v2.0 by-products.

#### **Fishery Assessment Peer Review Comments**

The internal peer reviewer agrees with the assessor's determination, who correctly classified the stock of Icelandic cod under Category C, as the stock is subject to a specific management regime in place and reference points are defined.

Fishery removals are included in the stock assessment and the stock has its biomass above reference point, so it passes Clauses C1.1 and C1.2.

Therefore, cod in FAO 27 Division 5.a (Icelandic Grounds) is **APPROVED** for the production of fishmeal and fish oil under the current MarinTrust v 2.0 by-products standards.

#### Notes for On-site Auditor

N/A

#### **Species Categorisation**

**NB**: If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as an MarinTrust raw material.

#### **IUCN Red list Category**

By-product material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

By-product material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a
  threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

#### Table 3 Species Categorisation Table

| Common name | Latin name   | Stock               | Management         | Category | IUCN Red List Category <sup>1</sup> | CITES<br>Appendix 1 <sup>2</sup> |
|-------------|--------------|---------------------|--------------------|----------|-------------------------------------|----------------------------------|
| Cod         | Gadus morhua | Cod in FAO 27       | Icelandic Ministry | С        | LC                                  | No                               |
|             |              | Division 5.a        | of Industries and  |          |                                     |                                  |
|             |              | (Icelandic Grounds) | Innovation         |          |                                     |                                  |

#### **CATEGORY C SPECIES**

In a by-product assessment, Category C species are those which are subject to a species-specific management regime and are usually targeted species in fisheries for human consumption.

Clause C1 should be completed for each Category C species. If there are no Category C species in the fishery under assessment, this section can be deleted. Where a species fails this Clause, it should be assessed as a Category D species instead.

| Spe   | ecies | Name   | Cod (Gadus morhua)   |      |
|---|-------|--|--|------|
| C1 Category C Stock Status - Minimum Requirements |       |  |  |      |
| CI  | C1.1  | Fishery remo   | vals of the species in the fishery under assessment are included in the stock assessment | Yes  |
|   |       | process, OR a  | are considered by scientific authorities to be negligible.                               |      |
|   | C1.2  | The species is considered, in its most recent stock assessment, to have a biomass above the limit Ye |  |      |
|   |       | reference po   | int (or proxy), OR removals by the fishery under assessment are considered by scientific |      |
|   |       | authorities to   | be negligible.   |      |
|   |       |  | Clause outcome:  | PASS |

Formatted: Font: 14 pt

C1.1 Fishery removals of the species in the fishery under assessment are included in the stock assessment process, OR are considered by scientific authorities to be negligible.

This stock assessment is a separable catch-at-age model, that uses catches (including commercial landings) in the model and in the forecast (ICES, 2022b). Long-term catch data are presented in Figure 1.

ICES advises that when the Icelandic management plan is applied, catches in the fishing year 2022/2023 should be no more than 208 846 tonnes (ICES, 2022a).

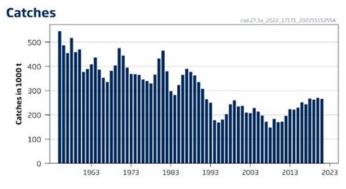

Figure 1. Long-term catches for Cod in Division 5.a (Icelandic Grounds). Source: ICES 2022a.

Therefore, fishery removals of the stock, including from the fishery under assessment, are included in the stock assessment process. The stock PASSES Clause C1.1.

C1.2 The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible.

The most recent ICES stock assessment (2022) indicates that spawning-stock biomass (SSB) and biomass of fish age 4+ (B4+) are above MSY Btrigger, Bpa, and Blim (Figure 2).

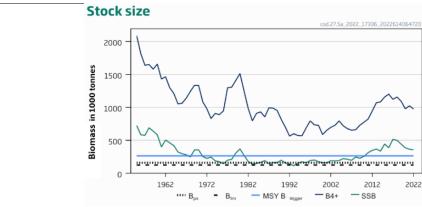

Figure 2. Long-term spawning stock biomass (SSB) and biomass of fish age 4+ (B4+) trends in Division 5.a (Icelandic Grounds).

Source: ICES 2022a

Therefore, the stock is considered, in its most recent stock assessment, to have biomass above the limit reference point. The stock PASSES Clause C1.2.
