Assessment Period	Decen	nber 2022 -	– December 2023	

Scope Details	
Main Species	Indian Oil Sardine (Sardinella longiceps)
Stock	Indian Ocean
Fishery Location	FAO Areas 51, 57
Management Authority	Thailand
(Country/ State)	IIIalialia
Gear Type(s)	Purse seine, pelagic trawl
Outcome of Assessment	
Peer Review Evaluation	Pass
Recommendation	Approve for use as MT raw material

Table 2. Assessment Determination

Assessment Determination

Indian oil sardine has been categorised by the IUCN as a species of Least Concern and does not appear in the CITES appendices. As at the time of the previous byproduct assessment, there is no evidence of any reference points or species-specific management measures for Indian oil sardine across the Indian Ocean as a whole, although efforts are being made to establish management in certain regions. Due to the absence of reference points, the byproduct was assessed under Category D.

Indian oil sardine in the Indian Ocean was awarded a Productivity score of 1 and a Susceptibility score of 3, leading to a Pass rating against Table D3. Therefore, it continues to meet the MT requirements and should remain approved for use as a raw material.

Fishery Assessment Peer Review Comments

The by-product fishery under assessment here is Indian oil sardine (*Sardinella longiceps*) fishery, pursued by Thai fishing vessels in FAO fishing area 51 and 57. Indian oil sardine is managed by the Thai government. For this Marin Trust assessment, the Indian oil sardine stock is scored as a category D species as it's not managed to species specific reference points.

The species scoring table has been completed by the auditor with sufficient evidence presented to support their final determination.

The peer review supports the auditor's recommendation to approve the FAO 51 and 57 Indian oil sardine stock pursued by the fishery under the Marin Trust IFFO RS v2.0 by-fishery standard for the production of fishmeal and fish oil.

Note	s for On-site Auditor			

Species Categorisation

NB: If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as an MarinTrust raw material.

IUCN Red list Category

By-product material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

By-product material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

CATEGORY C SPECIES

In a by-product assessment, Category C species are those which are subject to a species-specific management regime and are usually targeted species in fisheries for human consumption.

Clause C1 should be completed for each Category C species. If there are no Category C species in the fishery under assessment, this section can be deleted. Where a species fails this Clause, it should be assessed as a Category D species instead.

Spe	ecies	Name	n/a	
<u>C1</u>	Categ	ory C Stock Sta	atus - Minimum Requirements	
CI	C1.1		ovals of the species in the fishery under assessment are included in the stock assessment are considered by scientific authorities to be negligible.	
	C1.2	reference po	s considered, in its most recent stock assessment, to have a biomass above the limit int (or proxy), OR removals by the fishery under assessment are considered by scientific be negligible.

	CINI	tandard clause	7.5.3	

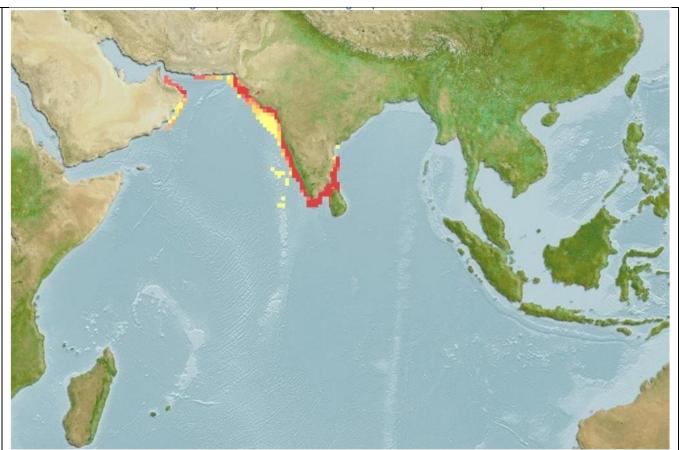

CATEGORY D SPECIES

Category D species are those which are not subject to a species-specific management regime. In the case of mixed trawl fisheries, Category D species may make up the majority of landings. The comparative lack of scientific information on the status of the population of the species means that a risk-assessment style approach must be taken.

D1	Species Name	Indian Oil Sardine				
	Productivity Attribute	Value	Score			
	Average age at maturity (years)	0.8 years	1			
	Average maximum age (years)	2.8 years	1			
	Fecundity (eggs/spawning)	Unknown	-			
	Average maximum size (cm)	23cm	1			
	Average size at maturity (cm)	12.9cm	1			
	Reproductive strategy	Broadcast spawner	1			
	Mean trophic level	2.4	1
