Table 1 Application details and summary of the assessment outcome

	Species:	Albacore tuna (Thunnus alalunga)	
Fishery Under Assessment	Geographical area:	FAO 34 Eastern Central Atlantic	
	Country of origin of the product:	Taiwan, Ivory Coast, Namibia (Flag Country)	
	Stock:	South Atlantic Albacore Tuna	
Date	May 2022		
Report Code	THA40		
Assessor	Ivan Mateo		
Country of origin of the product - PASS	Taiwan, Ivory Coast, Namibia (Flag Country)		
Country of origin of the product - FAIL	NA		

Application details and summary of the assessment outcome				
Company Name(s): Chotiwat Manufacturing Public Co., Ltd				
Country: Thailand				
Email address:		Applicant Code:		
Certification Body Details				
Name of Certification Body:		Global Trust Certification		
Assessor F	Peer Reviewer	Assessment Days	Initial/Surveillance/	
			Re-approval	
Ivan Mateo	Vito Romito	0.5	Initial	
Assessment Period	To May 2022	·		

Scope Details		
Main Species	Albacore tuna (Thunnus alalunga)	
Stock	Atlantic Albacore Tuna	
Fishery Location	FAO 34 Eastern Central Atlantic	
Management Authority	ICCAT	
(Country/ State)		
Gear Type(s)	Trawl, Purse Seine, Longline, Baitboat	
Outcome of Assessment		
Peer Review Evaluation	Approve	
Recommendation	Approve

Table 2. Assessment Determination

Assessment Determination

If a species is categorised as Endangered or Critically Endangered on IUCN's Red List, or if it appears in the CITES appendices, it cannot be approved for use as MarinTrust RS raw material. Albacore Tuna (*Thunnus alalunga*) is listed on the IUCN Red List as globally Near Threatened (NT) and Least Concern (LC) in Europe and is not listed in CITES; therefore, byproducts derived for this stock are eligible for approval for use as MarinTrust RS byproduct raw material.

On the basis of currently available information, three albacore stocks are assumed to exist in the Atlantic:

1. Northern Atlantic stock (North of 5°N)

2. Southern Atlantic stock (South of 5°N)

3. Mediterranean stock.

This assessment will only include the Southern Atlantic Albacore Tuna stock, which occurs in FAO area 34.

Fishery removals of this stock are considered in the stock assessment processes so it PASSES Clause C1.1. As of the latest assessment of stock status biomass for this stock is considered to be above the corresponding limit reference such that it PASSES Clause C1.2. As the stock passes both Clause C1.1 and C1.2, the by-products covered by this report is recommended for APPROVAL for the production of fishmeal and fish oil under the current MarinTrust RS v 2.2 by-product standard

Notes for On-site Auditor

Species Categorisation

NB: If any species is categorised as Endangered or Critically Endangered on the IUCN Red List, or if it appears in CITES Appendix 1, it **cannot** be approved for use as an MarinTrust raw material.

IUCN Red list Category

By-product material from a species listed by IUCN (the International Union for Conservation of Nature) under the Red List for the following categories shall immediately fail the assessment;

- EXTINCT (E) AND EXTINCT IN THE WILD (EW)
- CRITICALLY ENDANGERED (CR) facing an extremely high risk of extinction in the wild.
- ENDANGERED (EN) facing a very high risk of extinction in the wild.

By-product material may be used from the following categories provided that all clauses in the MarinTrust standard are passed.

- VULNERABLE (VU) facing a high risk of extinction in the wild.
- NEAR THREATENED (NT) does not qualify for above now, but is close or is likely to qualify for, a threatened category in the near future.
- LEAST CONCERN (LC) Widespread and abundant.
- DATA DEFICIENT (DD) and NOT EVALUATED (NE)

Table 3 Species Categorisation Table

Common name	Latin name	Stock	Management	Category	IUCN Red List Category ¹	CITES Appendix 1 ²
Albacore tuna	Thunnus alalunga	South Atlantic	ICCAT	С	Globally: Near Threatened (NT) Europe: Least Concern (LC)	No

CATEGORY C SPECIES

In a by-product assessment, Category C species are those which are subject to a species-specific management regime and are usually targeted species in fisheries for human consumption.

Clause C1 should be completed for each Category C species. If there are no Category C species in the fishery under assessment, this section can be deleted. Where a species fails this Clause, it should be assessed as a Category D species instead.

C1.2 The species is considered, in its most recent stock assessment, to have a biomass above the limit reference point (or proxy), OR removals by the fishery under assessment are considered by scientific authorities to be negligible.

In the 2020 assessment the Committee selected a base case to best represent the population dynamics of albacore and uncertainty around stock status as well as impact of alternative fishing scenarios. Base case model results suggest that biomass increased since fishing mortality started to decrease in the early 2000s, and currently there is a 99.4% probability that the South Atlantic albacore stock is neither overfished nor subject to overfishing, with only 0.6% probability for the stock to be overfished (Figure 2). The median MSY value was 27,264 t (ranging between 23,734 t and 31,567 t), the median estimate of current B2018/BMSY was 1.58 (ranging between 1.14 and 2.05) and the median estimate of current F2018/FMSY was 0.40 (ranging between 0.28 and 0.59). The wide confidence intervals reflect the large uncertainty around the estimates of stock status

With respect to the status of the stock with respect to its limit reference point (or proxy), an official limit reference point is not defined but with Bcurrent comfortably above BMSY the stock can be considered, in its most recent stock assessment, to have a biomass above any limit reference point (or proxy); therefore, the stock achieves a **PASS** against C1.2

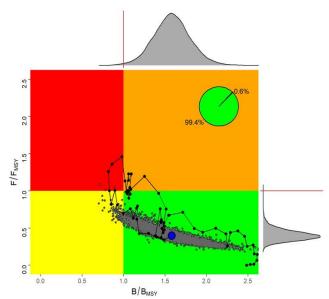

FIGURE 2. SOUTH ATLANTIC ALBACORE (KOBE PLOT). STOCK STATUS TRAJECTORIES OF B/BMSY AND F/FMSY OVER TIME (1956-2018), AS WELL AS UNCERTAINTY (GREY DOTS) AROUND THE CURRENT (2018) ESTIMATE (BLUE POINT) BASED ON BAYESIAN SURPLUS PRODUCTION MODEL WITH PROBABILITY OF BEING OVERFISHED AND OVERFISHING (RED, 0%), OF BEING NEITHER OVERFISHED NOR OVERFISHING (GREEN, 99.4%), AND OF BEING OVERFISHED (YELLOW, 0.6%).
