

FISHERY BY-PRODUCT REPORT

IFFO GLOBAL STANDARD FOR RESPONSIBLE SUPPLY OF FISHMEAL AND FISH OIL

Source: Nytjastofnar sjávar 2014/2015 og allahorfur 2015/2016

FISHERY By-Product:	Lemon sole (<i>Microstomus kitt</i>)
LOCATION:	Subarea IV and Divisions IIIa and VIId
DATE OF REPORT:	February 2016
ASSESSOR:	Sam Dignan

Global Trust Certification Ltd, 3rd Floor, Block 3, Quayside Business Park, Mill Street, Dundalk, Co. Louth, Ireland Tel: 042 932 0912 Fax 042 938 6864

Form No: 9a	Report Ref:	Page 1 of 5	CCM Code:

1. APPLICATION DETAILS AND SUMMARY OF THE ASSESSMENT OUTCOME		
Name: UFI		
Address:		
Country: UK and Ireland	Zip:	
Tel. No.	Fax. No.	
Email address:	Applicant Code	
Key Contact: :	Title:	
Certification Body Details		
Name of Certification Body:	SAI Global (Ireland)	
Assessor Name	Peer Reviewer	Initial/Surveillance/ Re-certification
Sam Dignan	Deirdre Hoare	2 nd Surveillance
Assessment Summary		
1. Scope of Assessment	By-Product surveillance year 2015	
2. Fishery By-Product	Lemon sole (<i>Microstomus kitt</i>)	
3. Fishery By-Product Location	Divisions IIIa and IVa, and in Subareas VI, VII, VIII, IX, XII, and XIV	
4. Fishery Method	Beam trawl, otter trawl, gillnet	
5. Outcome of Assessment	Maintain by-product approval	

2. GUIDANCE FOR ONSITE ASSESSMENT

3. ASSESSMENT DETERMINATION

There is a robust fishery management framework at the EU and UK & Ireland levels, but there is limited evidence that this is applied specifically to the lemon sole stock in the assessment area. Management is supported by species-specific data collection and stock assessment but significant improvements in the understanding of the stock could be made. The assessment team recommends maintaining the approval of this byproduct material against the IFFO RS standard.

4. RATIONALE OF THE ASSESSMENT OUTCOME

A. THE MANAGEMENT FRAMEWORK AND PROCEDURE

LEVEL OF COMPLIANCE	
<i>The management of the fishery used to produce the By- Product must include a legal and administrative basis for the implementation of measures and controls to support the management of the fishery.</i>	
LOW	An administrative framework that ensures an efficient management of the fishery is not established.
MEDIUM	An administrative framework that ensures an efficient management of the fishery is somehow established, but there is evidence of not being efficient to ensure the management of the stock.
HIGH	A legal and administrative framework that ensures an efficient management of the fishery is established and works efficiently.

Determination: There are effective fishery management frameworks in place at the EU and national levels, but the extent to which these frameworks are applied specifically to the byproduct stock under assessment is limited. A medium compliance rating remains appropriate.

M

Fishery management framework:

The UK & Ireland are members of the European Union and therefore in Community waters implement the Common Fisheries Policy (CFP). In force since 1983, the CFP aims to reconcile resource conservation with the preservation of income and jobs in coastal zones that offer few alternatives in terms of production or employment. It therefore covers not just resources but also markets and structures.

The CFP has undergone a series of updates, including the most recent reform which was implemented from 1st January 2014. The principal aim of the new CFP is to achieve maximum sustainable yield (MSY) for all stocks by 2015 where possible, and at the latest by 2020. The 2014 reform also details the gradual roll-out of a landing obligation (prohibiting discards), which began in selected fisheries in 2015 and will eventually encompass all commercial fisheries from 2019. Finally, the 2014 reform increases the role and importance of management at the regional level, and encourages more intensive stakeholder engagement.

The primary authorities with responsibility for implementing the CFP are the Department of Agriculture, Food and the Marine in Ireland, the Marine Management Organisation (in cooperation with the Department for Environment, Food and Rural Affairs) in England and Wales, and Marine Scotland, a Directorate of the Scottish Government, in Scotland.

Species-specific management:

Lemon sole in the area relevant to this assessment is managed as “Lemon sole in Subarea IV (North Sea) and Divisions IIIa (Skagerrak-Kattegat) and VIId (Eastern Channel)”.

There are no specific management objectives for the stock. Lemon sole is managed under a combined species TAC with witch flounder (*Glyptocephalus cynoglossus*) and for 2016 this has been set at 6,391t. ICES states that: management of lemon sole and witch under a combined species TAC prevents effective control of the single-species exploitation rates and could potentially lead to overexploitation of either species.

There is no minimum landing size. Lemon sole is mainly a bycatch species in mixed fisheries.

There are no reference points defined for this stock.

B. STOCK ASSESSMENT PROCEDURES AND MANAGEMENT ADVICE		
LEVEL OF COMPLIANCE		
<i>B. Research in support of fisheries management should exist.</i>		
LOW	Research to support the management of the stock does not exist	
MEDIUM	Research to support the management of the stock exists, however research programmes could be significantly improved to decrease scientific advice uncertainty.	
HIGH	Research to support the management of the stock exists, and research programmes for provision of scientific advice are considered adequate.	
<p>Determination: Some stock-specific research and stock assessment activities are conducted, but there is significant room for improvement to reduce uncertainty.</p> <p>Fisheries management in EU waters is supported by the International Council for the Exploration of the Sea (ICES). ICES utilises the best available scientific information collected by 20 member countries and others, and develops advice for the majority of commercially fished stocks in European waters.</p> <p>ICES provides biennial advice for lemon sole (<i>Microstomus kitt</i>) in Subarea IV and Divisions IIIa and VIId (North Sea, Skagerrak and Kattegat, Eastern English Channel).</p> <p>The most recent full assessment was conducted in 2015. The assessment is valid for 2016 and 2017 and shows a variable but relatively stable trend in recent years with the advice being that landings in 2016 and 2017 do not exceed 5,655 t in each year. ICES considers the stock to be data-deficient and no reference points have been defined.</p> <p>According to ICES information on stock structure, biological data, and catch-at-age information would be needed to be able to perform an analytic assessment and while methods to effectively measure the age and maturity status of this species are under development they remain uncertain.</p> <p>R7, R8</p>		M

C. STOCK STATUS		
LEVEL OF COMPLIANCE		
<i>C. The fish used to produce the fish By- Product is not considered to be critically at risk of over exploitation in accordance with the IUCN guidance.</i>		
LOW	The fish By-Product must not come from a species that is listed as extinct, or critically endangered.	
MEDIUM	The fish By- Product is from a species that is classified as vulnerable, but has a management regime in place that will control the level of fishing permitted. Or if a species is deemed to be endangered but the sub-group from where the fish By- Product is harvested is deemed scientifically to be at no risk of over exploitation.	
HIGH	The fish By- Product comes from a fishery that is not deemed to be at risk of over exploitation from fishing activities.	
<p>Determination: Lemon sole has not been categorised by the IUCN; however there is no additional evidence to lead the assessment team to believe the species is at serious risk and so a medium compliance rating is appropriate.</p> <p>The IUCN has not categorised <i>Microstomus kitt</i> and the species does not occur in the CITES appendices.</p> <p>R9, R10</p>		M
